

WHAT IS CLAIMED IS:

1. A barbecue device, comprising:
a tray supporting combustible material including at least one refractory member adapted to store heat;
a grill disposed above said tray and being connected thereto by a lifting member, said lifting member including a bar slidably received in an outer cylinder, whereby actuation of said bar with respect to said outer cylinder adjusts the height of grill with respect to said tray.
2. A barbecue device according to claim 1, wherein
a gear engages said bar; and
said gear being connected to a lever so that rotation of said lever actuates rotates said gear to move said bar when adjusting the height of said grill with respect to said tray.
3. A barbecue device according to claim 1, wherein
a plurality of a refractory members are disposed in said tray with spaces located between said refractory members allowing air to flow between said refractory members.
4. A barbecue device according to claim 1, wherein
said tray includes an astray having a handle, and adjustable leg members.
5. A barbecue device according to claim 1, wherein
said grill is horizontally fit between a longitudinal support in angular guides disposed substantially perpendicularly to said support.

6. A barbecue device, comprising
a tray supporting combustible material and including at least one heat source
means for retaining heat of the combustible material; and
a grill disposed above said tray and being connected thereto by an adjustment
means for adjusting the height of grill with respect to said tray.

7. A barbecue device according to claim 6, wherein
said heat retaining means is a brick.

8. A barbecue device according to claim 6, wherein
said heat retaining means is a plurality of bricks.
